Public health effects are disease and other health conditions influenced by exposure to pollutants. Indicators representing health outcomes that have been shown to be influenced by toxic chemical exposures were selected.

Public Health Effects Indicators:
(1) Low Birth-Weight Infants, (2) Asthma, (3) Heart Disease, (4) Cancer.

Regional Public Health Effects
(based on average of percentiles for the four indicators)

Statewide Public Health Effects
(based on average of percentiles for the four indicators)
