What is a serving?

For Adults

The recommended serving of fish is about the size and thickness of your hand. Give children smaller servings.

Why eat fish?

Eating fish is good for your health. Fish have Omega-3s that can reduce your risk for heart disease and improve how the brain develops in unborn babies and children.

What is the concern?

Some fish have high levels of PCBs and mercury. PCBs might cause cancer. Mercury can negatively affect how the brain develops in unborn babies and children. It is especially important for women who are pregnant or breastfeeding to follow these guidelines.

Safe to eat

Kokanee – 2 servings per week

OR

Rainbow trout – 1 serving per week

OR

There are no fish with high levels of chemicals
